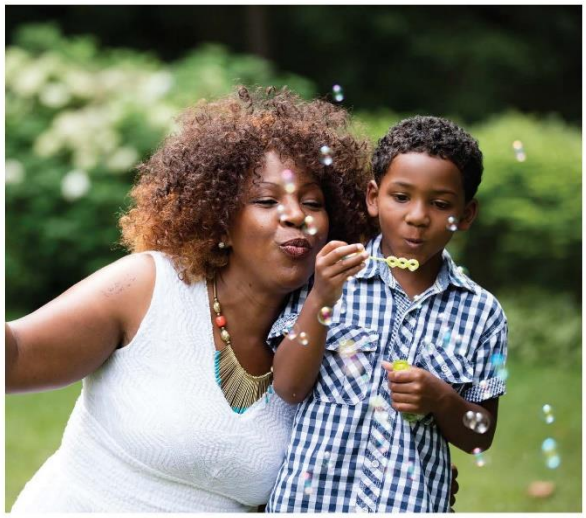
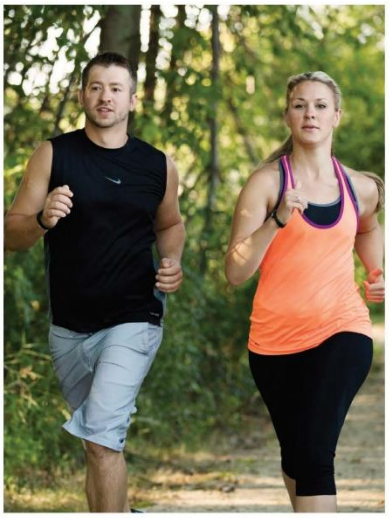
2023
Community Health Needs Assessment Report





Aurora Medical Center - Grafton

975 Port Washington Road

Grafton, WI 53024

Aurora Health Care® | Now part of ADVOCATEHEALTH

December 2023

Thank you for taking the time to learn more about the Aurora Medical Center – Grafton Community Health Needs Assessment (CHNA). This CHNA provides a comprehensive picture of the health status of the communities served by Aurora Medical Center - Grafton. Through understanding the health and social needs of our communities, our hospital can provide safe, high-quality care with compassion and dignity.

Based upon comprehensive community data and feedback, Aurora Medical Center - Grafton selected three health priorities for the 2023 CHNA. The priorities selected include the following:

- Access to Innovative Care and Services
- Behavioral Health: Mental Health and Substance Use
- Social Drivers of Health

At Aurora Medical Center - Grafton, we are committed to helping people live well by understanding the needs of the community and implementing culturally appropriate interventions that address the root causes of health. We also understand that creating and sustaining community partnerships to implement evidence-based programs is critical in addressing our communities' health needs.

We welcome and encourage community feedback regarding the health needs of our community and the CHNA process. A link at the end of the CHNA report will provide you with an opportunity to leave any feedback, comments or ideas. We also encourage you to review the report and provide recommendations regarding community programs or strategies that aim to address the identified priority health needs. Our Ozaukee County hospital has the honor of working with community partners and leaders to improve the health and wellness of diverse communities across our service area. With a comprehensive and thorough understanding of our communities' health needs, the hospital will be well positioned to help people live well and improve the quality of life among individuals, children, and families in the communities we serve.

Carla J. LaFever, MS
President

I. Executive Summary

Every three years, Aurora Health Care, Ascension Wisconsin, Froedtert & the Medical College of Wisconsin, and Washington Ozaukee Public Health Department conduct a collaborative Community Health Need Assessment (CHNA) in Washington and Ozaukee Counties. The CHNA serves as the foundation from which hospitals and the local health department develop their respective community health improvement strategies. These findings are also intended to inform a broader audience — community health centers, government health agencies, public health departments, philanthropy, community-based organizations, and civic leaders — about the top health issues facing our community.

For purposes of this CHNA process, Aurora Medical Center - Grafton defined the community as Ozaukee County.

The Aurora Medical Center - Grafton CHNA relies on four sources of information:

• Community Health Survey (primary data): online and phone surveys conducted June– November 2022, with more than 500 (400 phone and 113 online) Ozaukee County residents completing questions related to the top health needs in the community, individuals' perception of their overall health, access to health services, and social drivers of health, including racism and health equity.

• Stakeholder Interviews and Focus Groups (primary data): conducted by health system community benefit leaders with 21 individuals to identify the community's most pressing health issues and effective health improvement strategies.

• Aurora Grafton Teammate Survey (primary data): Aurora Grafton teammates were asked via online survey to rank the top health issues and social factors impacting the patients they served. 58 teammates responded between April and May 2023.

• Metopio (secondary data): Aurora Health Care has a contract with Metopio to provide an internet-based data resource for their hospitals. This robust platform offers curated data from public and proprietary sources for information on health behaviors and health risks, health outcomes, health care utilization, demographic, and community-level drivers of health like economic, housing, employment, and environmental conditions. Data for each indicator is presented by race, ethnicity, and gender when the data is available (Metopio: https://public.metop.io).

The top health issues identified in the Aurora Medical Center - Grafton Community Health Needs Assessment were:

- Mental Health, Mental Conditions, Suicide
- Alcohol and Substance Use
- Safe and Affordable Housing
- Accessible and Affordable Health Care
- Economic Stability and Employment
- Nutrition, Physical Activity and Obesity

The top health issues identified were presented to the Aurora Grafton Steering Council, and members were asked to rank the issues based on criteria including severity of the health issues, effectiveness of available interventions, available resources and ability to effectively address or impact health issues through collaboration.

Using these criteria, Aurora Medical Center - Grafton has prioritized the significant health needs to address in 2024-2026:

- Access to Innovative Care and Services
- Behavioral Health: Mental Health and Substance Use
- Social Drivers of Health

II. Description of Aurora Health Care and Aurora Medical Center - Grafton

A. Aurora Health Care

Aurora Health Care is the largest system in Wisconsin and a national leader in clinical innovation, health outcomes, consumer experience and value-based care. The state's largest private employer, the system serves patients across 17 hospitals, more than 70 pharmacies and more than 150 sites of care. Aurora Health Care, in addition to Advocate Health Care in Illinois and Atrium Health in the Carolinas, Georgia and Alabama, is now part of Advocate Health, the fifth-largest nonprofit, integrated health system in the United States. Committed to providing equitable care for all, Advocate Health provides nearly $5 billion in annual community benefits.

B. Aurora Medical Center - Grafton

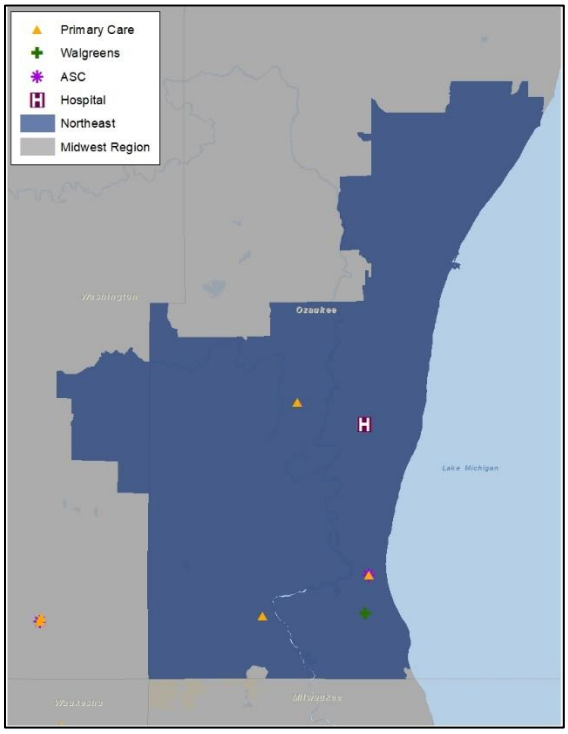
As the only 'green' medical center in Wisconsin, Aurora Grafton facility was designed with health and the environment in mind. The floor plan of this facility, along with its modern and efficient design, allows for ease of navigation. Aurora Grafton offers spacious, private rooms offering plenty of natural lighting to help make recovery as comfortable as possible. Family lounges and partner bedrooms near select patient rooms allow personal support teams to be near patients and their medical caregivers. For more information, see the Aurora Grafton fact sheet.

III. 2023 Community Health Needs Assessment

A. Community Definition

For the purposes of this assessment, Aurora Medical Center – Grafton's "community" is defined as Ozaukee County. Exhibit 1 shows a map of the defined community.

Exhibit 1: Aurora Medical Center - Grafton Community



Source: Aurora Health Care Business Development, 2023

1. Population

The Ozaukee County population is 91,029 residents (Metopio, American Community Survey, 2017-2021).

2. Social Drivers of Health

Aurora Health Care purchased access to Metopio, a software and services company that is grounded in the philosophy that communities are connected through places and people. Metopio's tools and visualizations use data to reveal valuable, interconnected factors that influence health outcomes in different locations. Metopio offers data, tailored to support all Aurora Health Care hospitals with identifying health inequities in communities. Metopio uses the most current data sources and creates tools and indices that focus on the communities within the service areas. The data can be used to focus on specific regions, communities, and hospital service areas.

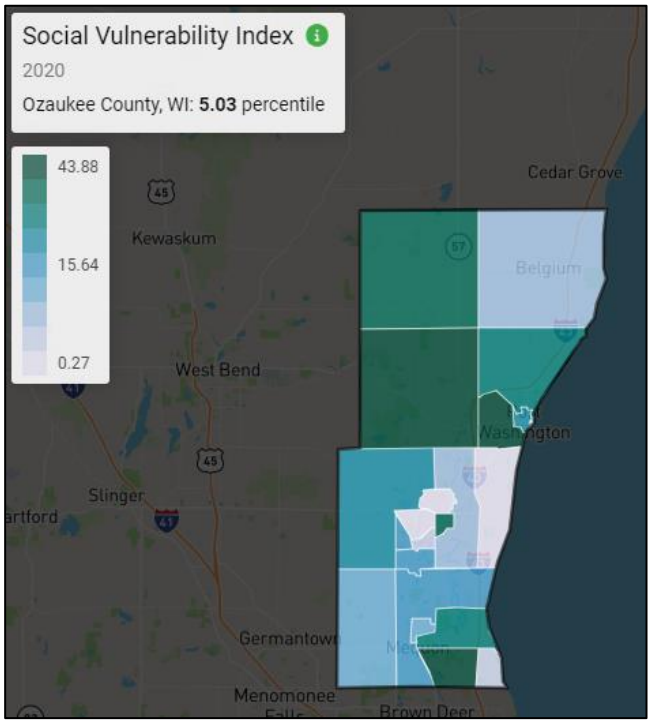
Social Vulnerability Index

Social Vulnerability Index (SVI) was created by the Centers for Disease Control and Prevention (CDC) to help public health officials and emergency response planners identify and map the communities that will most likely need support before, during, and after a hazardous event, such as a natural disaster, disease outbreak, or chemical spill.

SVI indicates relative vulnerability by ranking places on 15 social factors that can be divided into four categories: socioeconomic, household composition and disability, minority status and language, and housing type and transportation. The original score is on a scale from 0-1, but it is multiplied by 100 for readability on Metopio. A higher score represents a community more vulnerable to a hazardous event.

Ozaukee County has a social vulnerability index rating of 5.03, which his lower than the rating of Wisconsin (32.1) as shown in Exhibit 2 (Metopio, Centers for Disease Control and Prevention, 2020).

Exhibit 2: Ozaukee County Social Vulnerability Index Map 2020



Source: Metopio, American Community Survey, 2023

Key findings: Community Definition

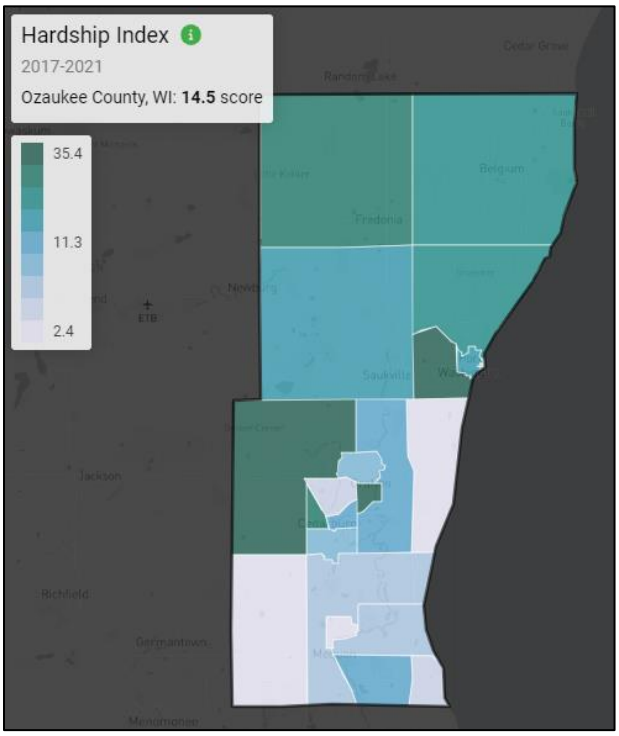
- The median age of Ozaukee County is 43.5 years old, higher than the Wisconsin average
- The median household income of Ozaukee County is $86,915, higher than the Wisconsin average

Hardship Index

The Hardship Index incorporates unemployment, age dependency, education, per capita income, crowded housing, and poverty into a single score that allows comparison between geographies. It is highly correlated with other measures of economic hardship, such as labor force statistics, and with poor health outcomes. Higher values indicate greater hardship and correlate higher with poor health outcomes.

Ozaukee County has a hardship index of 14.5, which is lower than the score for Wisconsin of 35.6 as shown in Exhibit 3 (Metopio, American Community Survey, 2017-2021).

Exhibit 3: Ozaukee County Hardship Index Map 2017-2021



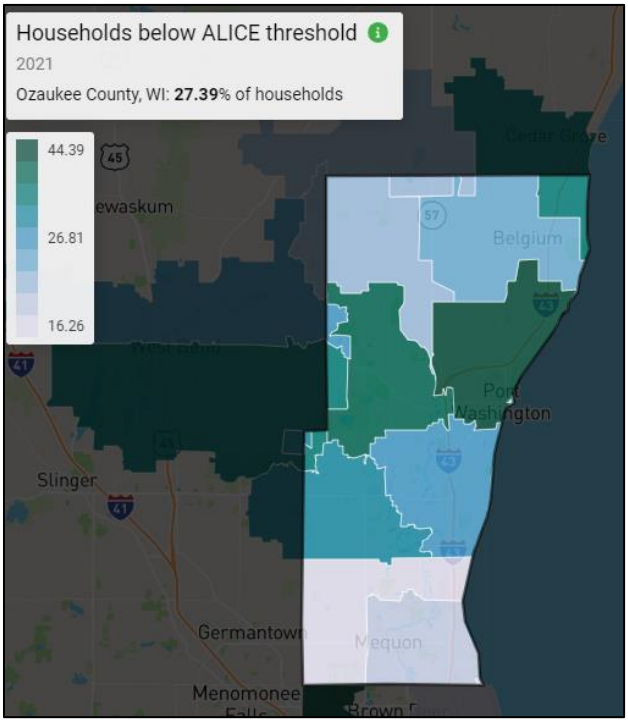
Source: Metopio, American Community Survey, 2023

ALICE Index

ALICE stands for: Asset Limited, Income Constrained, Employed. ALICE represents the percentage of households who may be above the poverty-line but are still unable to afford the basic necessities of housing, food, child-care, health care, and transportation due to the lack of jobs that can support basic necessities and increases in the basic cost of living.

In Ozaukee County, 27.4 percent of households are below the ALICE threshold, which is lower than Wisconsin at 34.3 percent, as shown in Exhibit 4 (Metopio, United Way ALICE Data, 2021).

Exhibit 4: Ozaukee County ALICE Map 2021



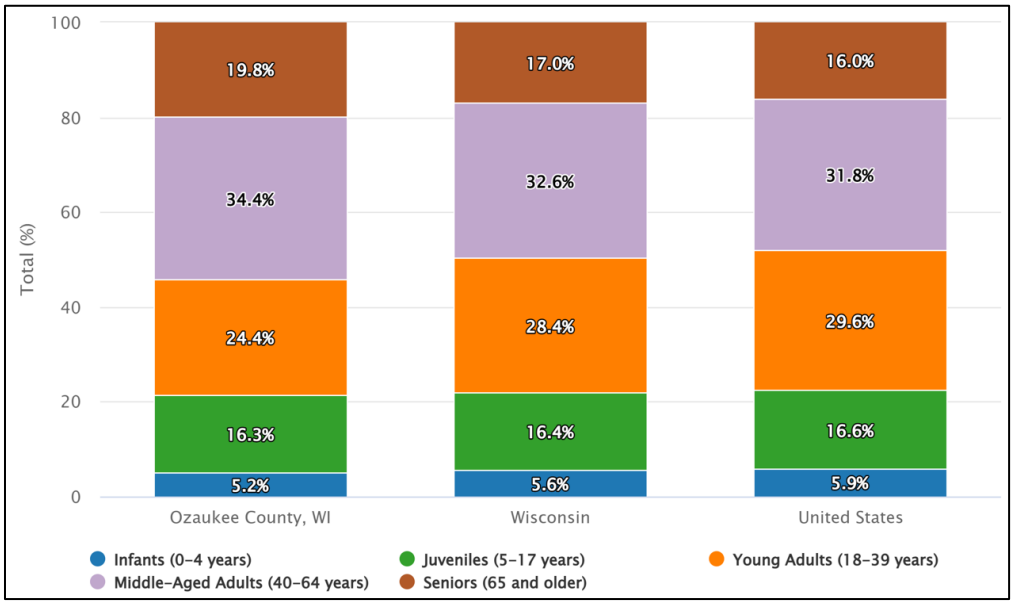
Source: Metopio, United Way ALICE Data, 2023

3. Demographics

Age and Gender

The median age in Ozaukee County is 43.5 years old. The county is comprised of 50.5 percent female and 49.5 percent male. The largest population in Ozaukee County are those ages 40-64 years at 34.4 percent as shown in Exhibit 5 (Metopio, American Community Survey, 2017-2021).

Exhibit 5: Ozaukee County Population by Age 2017-2021

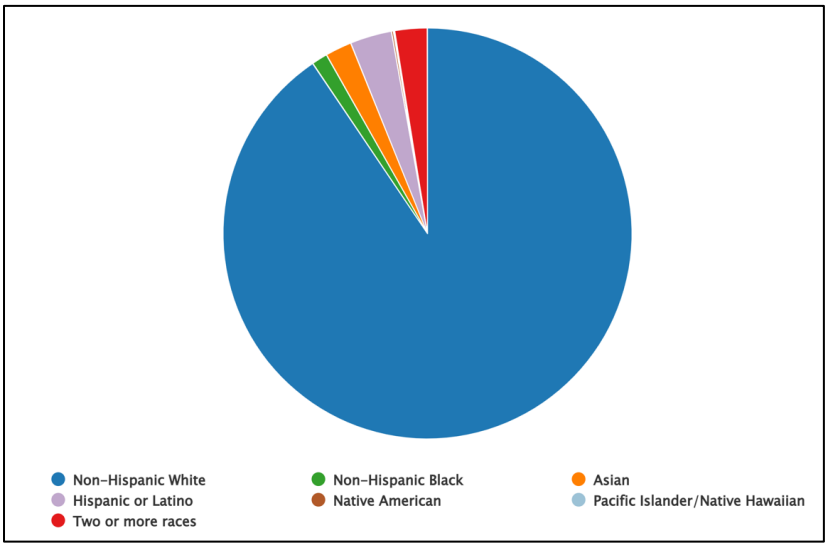


Source: Metopio, American Community Survey, 2023

Race and Ethnicity
Demographic data shows that Ozaukee County is 90.5 percent non-Hispanic White, which is the largest racial group followed by Hispanic or Latino population at 3.3 percent, two or more races at 2.6 percent, Asian or Pacific Islander at 2.1 percent, Non-Hispanic Black at 1.2 percent, and Native American at 0.1 percent.

A graph showing the racial and ethnic composition of Ozaukee County is displayed in Exhibit 6.

Exhibit 6: Ozaukee County Population by Race/Ethnicity 2017-2021



Source: Metopio, American Community Survey, 2023

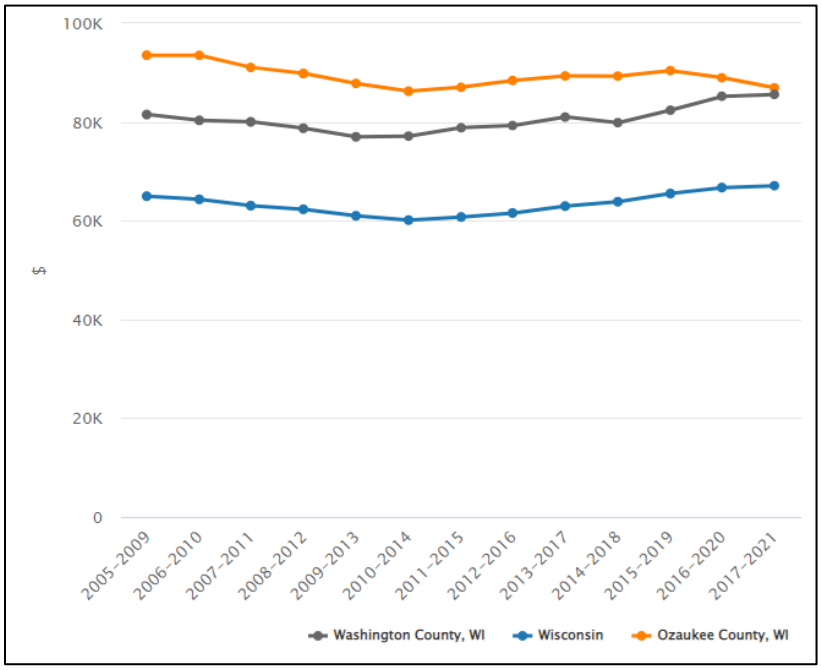
A total of 2.4 percent of Ozaukee County residents have Spanish as their primary language at home. A total of 0.9 percent of households in Ozaukee County have Asian languages like Chinese, Japanese, and Tagalog as the primary spoken language (Metopio, American Community Survey, 2017-2021).

Household/Family
In Ozaukee County, 4.4 percent of households are single parent households, meaning there are children present and are headed by a single parent (mother or father), with no partner present. Additionally, 28.6 percent of Ozaukee County seniors are living alone (Metopio, American Community Survey, 2017-2021).

4. Economics

Income
The median household income in Ozaukee County is $86,915, which is higher than the Wisconsin median household income of $67,080. The graph below shows the change over time in the Ozaukee County household income compared to Washington County and Wisconsin in Exhibit 7 (Metopio, American Community Survey, 2017-2021).

Exhibit 7: Ozaukee County Median Household Income 2005-2021



Source: Metopio, American Community Survey, 2023

Employment

The unemployment rate among Ozaukee County residents that are 16 years of age and older is 2.8 percent, which is lower compared to the state of Wisconsin at 3.6 percent.

5. Education

Educational Level

Ozaukee County educational attainment data was also reviewed and analyzed to gain an in-depth understanding of educational levels across the county. Educational attainment is one of the social drivers of health. Higher levels of education correlate with better health outcomes. The percent of individuals in Ozaukee County with a high school degree or higher is 97.4, which is higher than the Wisconsin average of 92.9 percent.

In Ozaukee County, 50.4 percent of residents 25 or older have a four-year college degree or higher, which is higher than Wisconsin at 31.5 percent (Metopio, American Community Survey, 2017-2021).

6. Health Care Resources in the Defined Community

In addition to Aurora Medical Center – Grafton, below are the other key health care resources within Ozaukee County.

Name of Facility	Type of Facility	Location
Ascension Columbia St. Mary's	Hospital	Ozaukee
Froedtert Community Hospital	Hospital	Mequon

B. How the CHNA was Conducted

1. Process and Partnership

Every three years, Aurora Health Care, Ascension Wisconsin, Froedtert & the Medical College of Wisconsin, and Washington Ozaukee Public Health Department conduct a collaborative Community Health Need Assessment (CHNA) in Ozaukee County. The CHNA serves as the foundation from which hospitals and the local health department develop their respective community health improvement strategies.

These findings are also intended to inform a broader audience — community health centers, government health agencies, public health departments, philanthropy, community-based organizations, and civic leaders — about the top health issues facing our community.

2. Data Collection

The Aurora Medical Center - Grafton CHNA relies on four sources of information:

• Community Health Survey (primary data): online and phone surveys conducted June– November 2022, with more than 500 (400 phone and 113 online) Ozaukee County residents completing questions related to the top health needs in the community, individuals' perception of their overall health, access to health services, and social drivers of health, including racism and health equity.

• Stakeholder Interviews and Focus Groups (primary data): conducted by health system community benefit leaders with 21 individuals to identify the community's most pressing health issues and effective health improvement strategies.

• Aurora Grafton Teammate Survey (primary data): Aurora Grafton teammates were asked via online survey to rank the top health issues and social factors impacting the patients they served. 58 teammates responded between April and May 2023.

• Metopio (secondary data): Aurora Health Care has a contract with Metopio to provide an internet-based data resource for their hospitals. This robust platform offers curated data from public and proprietary sources for information on health behaviors and health risks, health outcomes, health care utilization, demographic, and community-level drivers of health like economic, housing, employment, and environmental conditions. Data for each indicator is presented by race, ethnicity, and gender when the data is available (Metopio: https://public.metop.io).

C. Summary of CHNA Findings

1. Overall Health Status

Life Expectancy
The average life expectancy in Ozaukee County is 81.2 years, higher than the Wisconsin average of 78.9 years and the U.S. at 78.5 years (County Health Rankings, National Center for Health Statistics, 2018-2020).

Top Health Concerns
The top health issues identified in the Ozaukee County Community Health Needs Assessment were:

- Mental Health, Mental Conditions, Suicide
- Alcohol and Substance Use
- Safe and Affordable Housing
- Accessible and Affordable Health Care
- Economic Stability and Employment
- Nutrition, Physical Activity and Obesity

2. Access to Care and Health Care Coverage

Why is this important?
Adequate and affordable health insurance coverage is a commonly understood factor impacting health care access and improving the health of individuals and our community. However, sometimes people don't get recommended health care services, like cancer screenings, because they don't have a primary care provider. Other times, it's because they live too far from health care providers who offer them. Interventions to increase access to health care professionals and improve communication – in person or remotely – can help more people get the care they need.

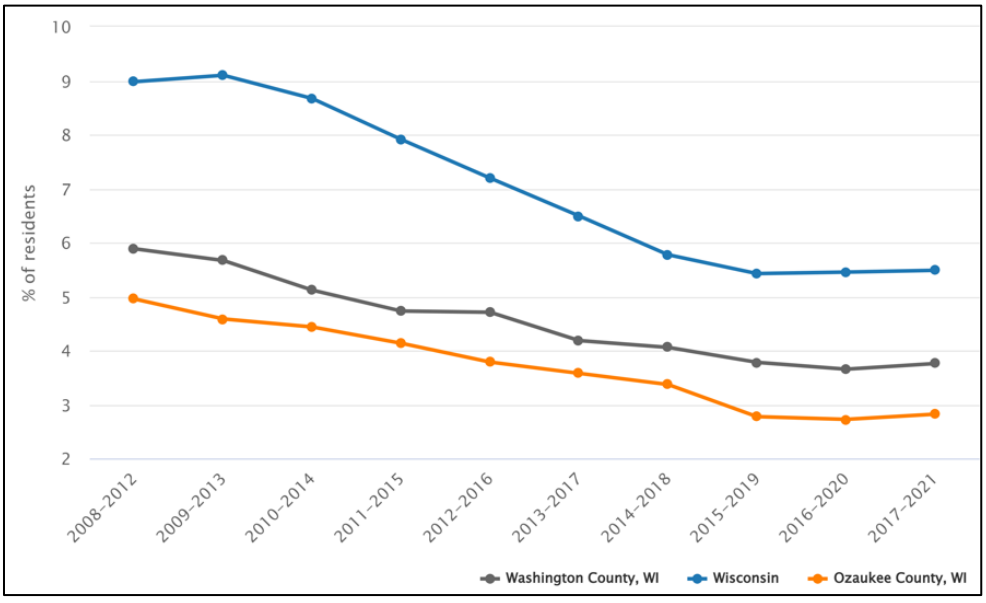
Key findings: Health Care Coverage and Access to Care

- The uninsured rate of Ozaukee County residents has decreased since 2008-2012
- The Ozaukee County Primary Care Provider and Mental Health Provider rates are both higher than the Wisconsin averages
- Three percent of Ozaukee County Phone Survey respondents reported using the Emergency Department for Primary Care

Health Care Coverage

Uninsured Rate
The exhibit below shows the overall rate of uninsured residents in Ozaukee County, which has decreased since the baseline of 2008-2012.

Exhibit 8: Ozaukee County Health Uninsured Rate 2008-2021



Source: Metopio, American Community Survey, 2023

Health Insurance Coverage – Payer Mix

Aurora Medical Center - Grafton has a payer mix based on unique patients which is comprised of:

AURORA MEDICAL CENTER – GRAFTON	Commercial	Medicaid	Medicare	Self-Pay	Other
	48.5%	10.7%	36.1%	1.3%	3.4%

Source: Aurora Health Care, Business Development, EpicHB, 2023

Access to Care

Primary Care Provider Rate

The Primary Care Providers include general practice, internal medicine, obstetrics and gynecology or pediatrics. This data excludes federal physicians and physicians ages 75 and older. The Primary Care Provider rate in Ozaukee County is 155.8 physicians per 100,000 residents, which is higher than the Wisconsin average of 91.8 physicians per 100,000 residents (Metopio, Health Resources and Services Administration, 2020).

Mental Health Provider Rate

The Mental Health Provider rate in Ozaukee County is 317.7 providers per 100,000 residents, which is higher than the Wisconsin average of 272.2 providers per 100,000 residents (Metopio, Centers for Medicare and Medicaid Services (CMS): National Provider Identifier Files (NPI), 2021).

Access to Healthcare Services

Sixty-nine percent of Ozaukee County Phone Survey respondents reported using a doctor or nurse practitioner's office as their primary source of health care, a decrease from 81 percent in 2011. Three percent of Ozaukee County Phone Survey respondents reported using an Emergency Department as their primary source of healthcare, an increase from 1 percent in 2019 (JKV Research, LLC. Ozaukee County Community Health Survey, 2022). Fifty-one percent of Aurora Grafton teammates surveyed said access to healthcare was one of the top factors impacting the overall health of the patients they serve (Aurora Grafton Teammate Survey, 2023).

3. Health Risk Behaviors

Why is this important?

Many chronic diseases are caused by a short list of risk behaviors: tobacco use and exposure to secondhand smoke, poor nutrition, including diets low in fruits and vegetables and high in sodium and saturated fats, lack of physical activity, and excessive alcohol use.

Tobacco Use

Adults Who Smoke

In 2021, 11.1 percent of adults in Ozaukee County reported having smoked at least 100 cigarettes in their lifetime and currently smoke every day or most days, a decrease from the 1996 baseline of 20.5 percent (Metopio, Behavioral Risk Factor Surveillance System (BRFSS), PLACES, Dwyer-Lindgren, Mokdad, et al. 2021).

Key findings: Health Risk Behaviors

- Twenty-four percent of Ozaukee County phone survey respondents reported binge drinking in the past month
- The Ozaukee County opioid-related Emergency Department visit rate among Young Adults (18-39 years old) is 3.4 times higher than the county average

Adults Who Vape
In 2022, four percent of Ozaukee County phone survey respondents reported vaping, which remained the same from 2019 (JKV Research, LLC. Ozaukee County Community Health Survey, 2022).

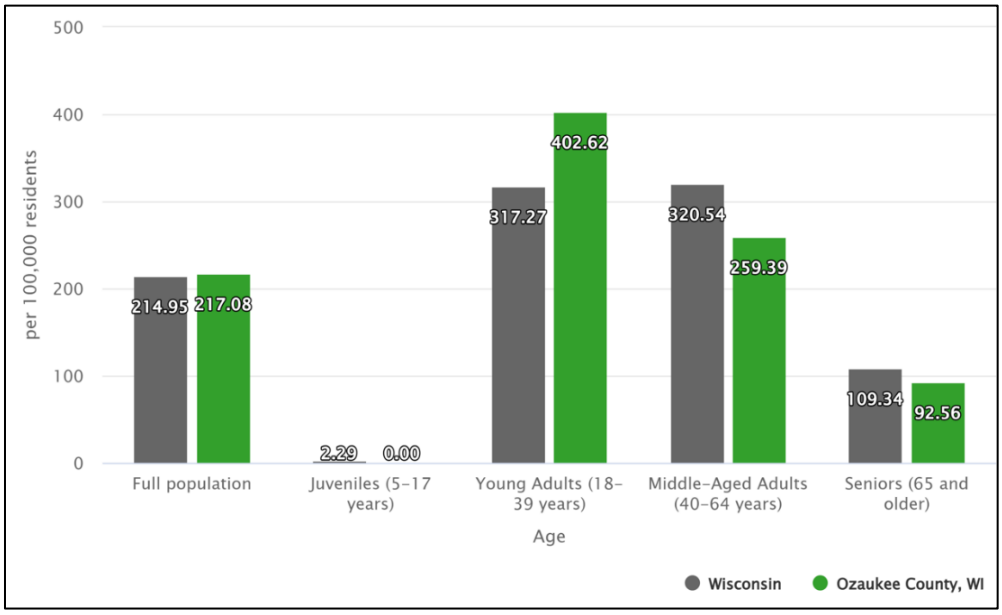
Alcohol Use

Binge Drinking
Binge drinking reflects the percent of adults aged 18 and older who report having five or more drinks (men) or four or more drinks (women) on an occasion in the past 30 days. Alcohol use is likely seriously underreported, so these estimates are an extreme lower bound on actual binge drinking prevalence.
In 2022, 24 percent of Ozaukee County phone survey respondents reported binge drinking, higher than the United States average of 16 percent (JKV Research, LLC. Ozaukee County Community Health Survey, 2022).

Emergency Department Rate due to Alcohol Use
The emergency department (ED) rate due to alcohol use in Ozaukee County is 378.6 per 100,000 residents, which is lower than the Wisconsin rate of 414.4 per 100,000 residents. By race and ethnicity, the rates in Ozaukee County are highest among those who are Non-Hispanic Black at 775.8 per 100,000 residents, which is twice as high as the county average. Additionally, there are higher rates among Young Adults (18-39 years) at 642.2 per 100,000 residents, which is 1.7 times higher than the county average (Metopio, Wisconsin Health Association Information Center (WHAIC), 2018-2022).

Hospitalization Rate due to Alcohol Use
In Ozaukee County, the hospitalization rate due to alcohol use was 217.1 per 100,000 residents, which is higher than the Wisconsin rate of 215.0 per 100,000 residents. By race and ethnicity, the rates in Ozaukee County are highest among those who are Non-Hispanic Black at 344.4 per 100,000 residents, which is 1.6 times higher than the county average. Additionally, there are high rates among Young Adults (18-39 years) at 402.6 per 100,000 residents (shown in Exhibit 9), which is 1.9 times higher than the county average (Metopio, Wisconsin Health Association Information Center (WHAIC), 2018-2022).

Exhibit 9: Ozaukee County Hospitalization Rate for Alcohol Use by Age 2018-2022



Source: Metopio, Wisconsin Health Association Information Center (WHAIC), 2023

Other Substances

Emergency Department Rate due to Substance Use

Substance use includes the use of controlled substances such as alcohol, heroin, methadone, cocaine, hallucinogens, and other substances. In Ozaukee County, the ED rate due to substance use is 519.7 per 100,000 residents, which is lower than Wisconsin (640.6 per 100,000 residents). By race and ethnicity, the rates are highest among the Non-Hispanic Black population at 1,072.5 per 100,000 residents, which is twice as high as the county average. The rate among Young Adults (18-39 years) is 939.8 per 100,000 residents, which is 1.8 times higher than the county average (Metopio, Wisconsin Health Association Information Center (WHAIC), 2018-2022).

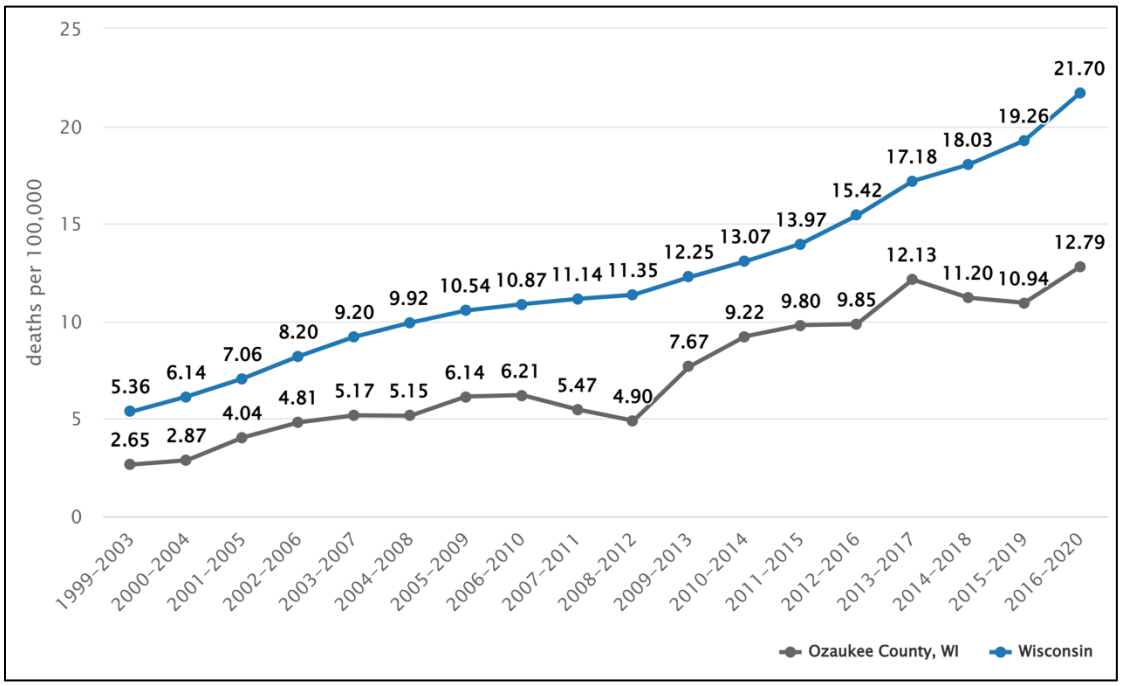
Hospitalization Rate due to Substance Use

The Ozaukee County hospitalization rate due to substance use is 294.0 per 100,000 residents, which is lower than the Wisconsin rate at 305.6 per 100,000 residents. By race and ethnicity, the rates are highest among the Non-Hispanic Black population at 506.5 per 100,000 residents, which is 1.7 times higher than the county average. The rate among Young Adults (18-39 years) is 611.3 per 100,000 residents, which is twice as high as the county average (Metopio, Wisconsin Health Association Information Center (WHAIC), 2018-2022).

Drug Overdose Mortality

The drug overdose mortality rate is the number of deaths per 100,000 residents due to drug poisoning (such as overdose), whether accidental or intentional. In Ozaukee County, the rate of drug overdose mortality rate is 12.8 per 100,000 residents, which is lower than the Wisconsin rate of 21.7 per 100,000 residents. However, the Ozaukee County drug overdose mortality rate has been increasing over time (shown in Exhibit 10) (Metopio, National Vital Statistics System-Mortality, CDC Wonder, 2016-2020).

Exhibit 10: Drug Overdose Mortality Rates Trend Over Time 1999-2020



Source: Metopio, National Vital Statistics System-Mortality, CDC Wonder, 2023

Emergency Department Rate due to Opioid Use
In Ozaukee County, the ED rate due to opioid use is 135.7 per 100,000 residents, which is lower than the Wisconsin rate of 206.5 per 100,000 residents. The county rates are highest among Young Adults (18-39 years) at 465.4 per 100,000 residents, which is 3.4 times higher than the county average (Metopio, Wisconsin Health Association Information Center (WHAIC), 2018-2022).

Hospitalization Rate due to Opioid Use
In Ozaukee County, the hospitalization rate due to opioid use is 225.7 per 100,000 residents. This rate is lower than Wisconsin at 250.0 per 100,000 residents. By race and ethnicity, the Ozaukee County hospitalization rates for opioid use are highest among the Non-Hispanic Black population at 354.9 per 100,000 residents, which is 1.6 times higher than the county average. The rate among Young Adults (18-39 years) is 391.8 per 100,000 residents, which is 1.7 times higher than the county average (Metopio, Wisconsin Health Association Information Center (WHAIC), 2018-2022).

Physical Activity and Inactivity

Adults with No Exercise
This indicator is defined as the percent of resident adults ages 18 and older who answered "no" to the following question: "During the past month, other than your regular job, did you participate in any physical activities or exercises such as running, calisthenics, golf, gardening or walking for exercise?". In Ozaukee County, 14.9 percent of adults reported no exercise in the past month, which is lower than Wisconsin at 19.7 percent (Metopio, BRFSS, Diabetes Atlas, PLACES, 2021).

Weight Status

Adults Who Are Obese
In Ozaukee County, 28.1 percent of resident adults aged 18 and older are obese (have a body mass index (BMI) ≥30.0 kg/m² calculated from self-reported weight and height), which is lower than the Wisconsin rate of 34.8 percent. This excludes those with abnormal height or weight and pregnant women (Metopio, BRFSS, Diabetes Atlas, PLACES, 2021).

4. Disease and Chronic Conditions

Why is this important?
Six in ten Americans live with at least one chronic disease, like heart disease and stroke, cancer, or diabetes. These and other chronic diseases are the leading causes of death and disability in America, and they are also a leading driver of health care costs.

Cancer
The annual cancer diagnosis rate for all invasive cancers in Ozaukee County is 484.2 cases per 100,000 residents, which is higher than Wisconsin at 470.8 cases per 100,000 residents (Metopio, National Cancer Institute, Wisconsin Department of Health Services, 2015-2019).

Exhibit 11 shows the mortality, incidence, and screening rates for various types of cancer in Ozaukee County, compared to the Wisconsin and United States averages.

Exhibit 11: Ozaukee County Cancer Table

Topic	Ozaukee County	Wisconsin	United States
Breast cancer mortality *deaths per 100,000, 2016-2020*	8.3	9.4	10.6
Non-invasive breast cancer diagnosis rate *per 100,000 female residents, 2015-2019*	51.3	33.7	29.4
Mammography use *Females % of adults, 2020*	76.8	74.3	72.7
Colorectal cancer mortality *deaths per 100,000, 2016-2020*	11.0	12.0	13.4
Colorectal cancer screening *% of adults, 2020*	63.3	61.2	69.1
Pap smear use *Females, Adults (18-64 years), % of adults, 2020*	85.4	83.4	82.3
Lung, trachea, and bronchus cancer mortality *deaths per 100,000, 2016-2020*	28.8	31.6	31.7
Lung cancer diagnosis rate *per 100,000 residents, 2015-2019*	50.1	58.6	56.3
Oral cancer diagnosis rate *per 100,000 residents, 2015-2019*	10.1	12.5	12.0
Prostate cancer diagnosis rate *per 100,000 male residents, 2015-2019*	137.3	118.3	109.9

Metopio, National Cancer Institute, Wisconsin Department of Health Services, 2015-2019

Key findings: Disease and Chronic Conditions

- Twenty-one percent of Ozaukee County phone survey respondents reported ever having been told by a doctor they have a mental health condition
- Key stakeholders and community members ranked mental health as a top community issue
- The Ozaukee County Emergency Department visit rate due to hypertension among the Non-Hispanic Black population is 4.5 times higher than the county average

Cardiovascular Disease

High Cholesterol Prevalence

In Ozaukee County, 30.3 percent of adults ages 18 and older reported having been told by a doctor, nurse or health professional that they have high cholesterol. This rate is similar to Wisconsin at 30.5 percent and the U.S. at 31.1 percent (Metopio, PLACES, BRFSS, 2021).

High Blood Pressure Prevalence

In Ozaukee County, 25.8 percent of adults ages 18 and older reported having been told by a doctor, nurse or health professional that they have high blood pressure. This rate is lower than Wisconsin (28.3 percent) and the U.S. (30.4 percent) (Metopio, PLACES, BRFSS, 2021).

Coronary Heart Disease
In Ozaukee County, 4.2 percent of adults ages 18 and older reported ever being told by a doctor, nurse or health professional that they have angina or coronary heart disease. This rate is lower than Wisconsin (5.0 percent) and the U.S. (5.2 percent) (Metopio, PLACES, BRFSS, 2021).

Coronary Heart Disease Mortality
The coronary heart disease mortality indicator is represented as deaths per 100,000 residents related to coronary heart disease, specifically ischemic heart diseases such as acute myocardial infarction, other acute ischemic heart diseases, and other forms of chronic ischemic heart disease. In Ozaukee County, the coronary heart disease mortality rate is 77.2 per 100,000 residents, which is lower than Wisconsin (87.2 per 100,000 residents) and the U.S. (91.5 per 100,000 residents) (Metopio, National Vital Statistics System-Mortality, 2016-2020).

Emergency Department Rate due to Heart Failure
In Ozaukee County, the ED rate due to heart failure is 97.8 per 100,000 residents, which is lower than the Wisconsin rate of 188.6 per 100,000 residents (Metopio, Wisconsin Health Association Information Center (WHAIC), 2018-2022).

Hospitalization Rate due to Heart Failure
The Ozaukee County hospitalization rate due to heart failure is 324.0 per 100,000 residents, which is lower than the Wisconsin rate of 398.1 per 100,000 residents (Metopio, Wisconsin Health Association Information Center (WHAIC), 2018-2022).

Emergency Department Rate due to Hypertension
The Ozaukee County ED rate due to hypertension is 209.4 per 100,000 residents, which is lower than the Wisconsin rate of 292.1 per 100,000 residents. The highest rates in Ozaukee County are among the Non-Hispanic Black population at 941.8 per 100,000 residents, which is 4.5 times higher than the county average (Metopio, Wisconsin Health Association Information Center (WHAIC), 2018-2022).

Hospitalization Rate due to Hypertension
In Ozaukee County, the hospitalization rate due to hypertension is 21.6 per 100,000 residents, which is lower than the Wisconsin rate of 40.2 per 100,000 residents. The highest rates in Ozaukee County for hospitalization due to hypertension is among the Non-Hispanic Black population at 175.5 per 100,000 residents, which is over eight times higher than the county average (Metopio, Wisconsin Health Association Information Center (WHAIC), 2018-2022).

Emergency Department Rate Due to Stroke
In Ozaukee County, the ED rate due to stroke is 111.9 per 100,000 residents (adults ages 18 and older). This rate is similar to the Wisconsin rate of 112.3 per 100,000 residents (Metopio, Wisconsin Health Association Information Center (WHAIC), 2018-2022).

Hospitalization Rate Due to Stroke
The hospitalization rate due to stroke in Ozaukee County is 237.2 per 100,000 residents, which is lower than the Wisconsin rate of 259.1 per 100,000 residents (Metopio, Wisconsin Health Association Information Center (WHAIC), 2018-2022).

Stroke Mortality
In Ozaukee County, the stroke mortality rate (deaths due to stroke) is 27.7 deaths per 100,000 residents. This rate is lower than the Wisconsin rate of 33.8 deaths per 100,000 residents. (Metopio, National Vital Statistics System-Mortality. 2016-2020).

Diabetes

Diagnosed Diabetes
In Ozaukee County, 6.5 percent of adults (ages 18 and older) reported ever being told by a doctor, nurse or health professional that they have diabetes (other than during pregnancy), which is lower than Wisconsin at 8.1 percent (Metopio, Diabetes Atlas, PLACES, 2021).

Emergency Department Rate due to Diabetes
The ED rate due to diabetes in Ozaukee County is 346.0 per 100,000 residents, which is lower than the Wisconsin rate of 374.2 per 100,00 residents (Metopio, Wisconsin Health Association Information Center (WHAIC), 2018-2022).

Hospitalization Rate due to Diabetes
In Ozaukee County, the hospitalization rate due to diabetes is 82.8 per 100,000 residents, which is lower than the Wisconsin rate of 147.7 per 100,000 residents (Metopio, Wisconsin Health Association Information Center (WHAIC), 2018-2022).

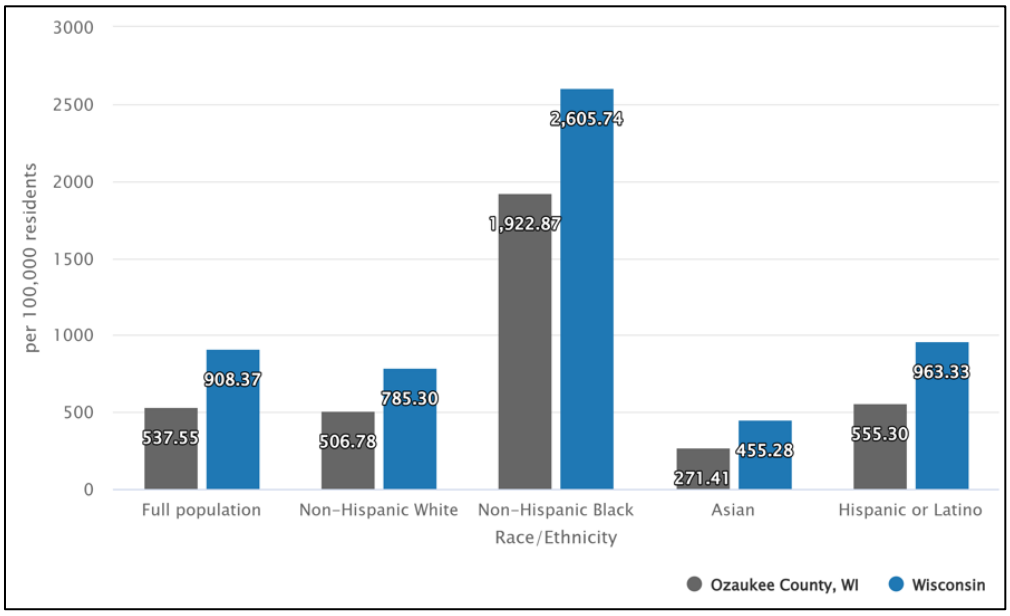
Mental Health

Mental health was identified as a top health issue by community members, Aurora Grafton teammates, and key stakeholders. Stakeholders reported needed strategies including more providers, collaboration, school-based mental health screenings, more staff, education to reduce stigma, government services, increased funding, access, employer trainings, programs, insurance coverage, and crisis management.

Mental Health Conditions
Twenty-one percent of Ozaukee County phone survey respondents reported being diagnosed with a mental health condition, higher than the 2011 baseline of 13 percent. Eighty-six percent of these respondents are currently seeing a provider for their condition (JKV Research, LLC. Ozaukee County Community Health Survey, 2022).

Emergency Department Rate due to Mental Health
The ED rate due to mental health in Ozaukee County is 537.6 per 100,000 residents, which is lower than the Wisconsin rate of 908.4 per 100,000 residents. The highest rates in Ozaukee County for ED rates due to mental health are among the Non-Hispanic Black population at 1,922.9 per 100,000 residents, which is 3.6 times higher than the county average (shown in Exhibit 12). The rate among Young Adults (18-39 years) is 947.5 per 100,000 residents, which is 1.8 times higher than the county average (Metopio, Wisconsin Health Association Information Center (WHAIC), 2018-2022).

Exhibit 12: Ozaukee County Mental Health Emergency Department Visit Rate by Race and Ethnicity 2018-2022



Source: Metopio, Wisconsin Health Association Information Center (WHAIC), 2023

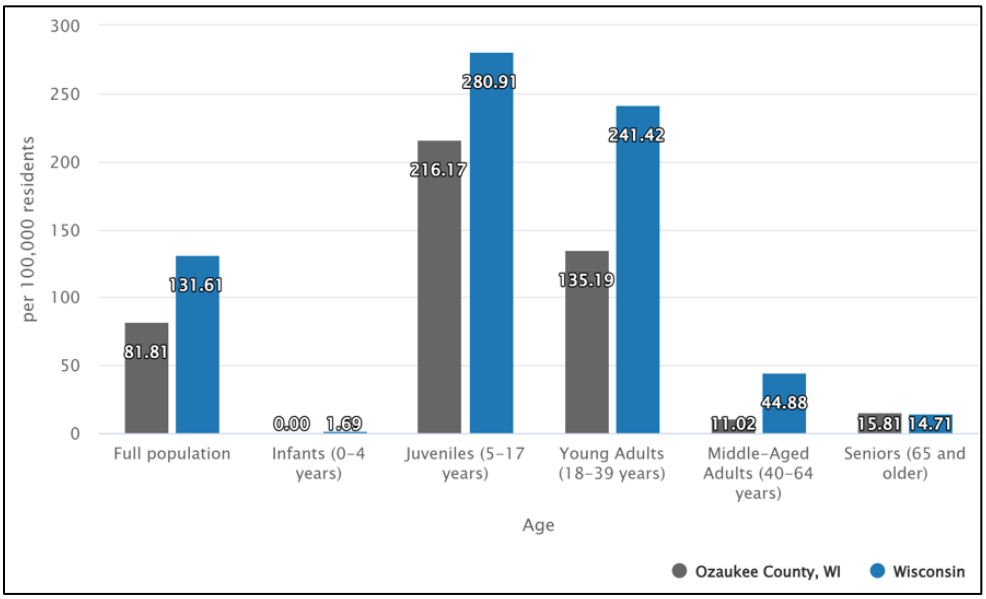
Hospitalization Rate due to Mental Health

The hospitalization rate due to mental health in Ozaukee County is 635.3 per 100,000 residents, which is slightly lower than the Wisconsin rate of 648.0 per 100,000 residents. The hospitalization rate due to mental health is highest among Young Adults (18-39 years) at 1,093.7 per 100,000 residents and Juveniles (5-17 years) at 992.0 per 100,000 residents (Metopio, Wisconsin Health Association Information Center (WHAIC), 2018-2022).

Emergency Department Rate due to Suicide and Self-Injury

The ED rate due to suicide and self-injury in Ozaukee County is 81.8 per 100,000 residents, which is lower than the Wisconsin rate of 131.6 per 100,000 residents. The ED rate due to suicide and self-injury is highest among Juveniles (5-17 years) at 216.2 per 100,000 residents, which is 2.6 times higher than the county average (shown in Exhibit 13) (Metopio, Wisconsin Health Association Information Center (WHAIC), 2018-2022).

Exhibit 13: Ozaukee County Emergency Department Rate due to Suicide and Self-Injury by Age 2018-2022



Source: Metopio, Wisconsin Health Association Information Center (WHAIC), 2023

Hospitalization Rate due to Suicide and Self-Injury

In Ozaukee County, the hospitalization rate due to suicide and self-injury is 73.8 per 100,000 residents, which is lower than the Wisconsin rate of 80.2 per 100,000 residents. The hospitalization rate due to suicide and self-injury in Ozaukee County is highest by race and ethnicity among the Non-Hispanic Black population at 170.9 per 100,000 residents, which is 2.3 time higher than the county average. The rate among Young Adults (18-39 years) is 150.8 per 100,000 residents, which is twice as high as the county average (Metopio, Wisconsin Health Association Information Center (WHAIC), 2018-2022.

Suicide Mortality

The definition of suicide is “death arising from an act inflicted upon oneself with the intent to kill oneself”. In the United States, decisions about whether deaths are listed as suicides on death certificates are usually make by a coroner or medical examiner. Suicide mortality in Ozaukee County is 10.6 deaths per 100,000 residents, which is lower than Wisconsin at 14.7 deaths per 100,000 residents. In Ozaukee County, males have the highest suicide mortality at 17.3 deaths per 100,000 residents (Metopio, National Vital Statistics System-Mortality, 2016-2020).

Respiratory Disease

Adults with Current Asthma

In 2022, 8 percent of Ozaukee County phone survey respondents reported having ever been told by a doctor, nurse or other health professional that they have asthma, and 66 percent of those respondents are currently seeing a doctor, nurse or other health professional for their condition (JKV Research, LLC. Ozaukee County Community Health Survey, 2022).

Emergency Department Rate due to Asthma
The ED rate due to asthma in Ozaukee County is 94.5 per 100,000 residents, which is lower than the Wisconsin rate of 232.8 per 100,000 residents (Metopio, Wisconsin Health Association Information Center (WHAIC), 2018-2022).

Hospitalization Rate due to Asthma
In Ozaukee County, the hospitalization rate due to asthma is 13.7 per 100,000 residents, which is lower than the Wisconsin rate of 22.7 per 100,000 residents (Metopio, Wisconsin Health Association Information Center (WHAIC), 2018-2022).

Impact of COVID-19

The COVID-19 pandemic brought profound changes to the way people work, communicate, learn, play, eat, socialize and receive health care. COVID-19 raced across the American landscape bringing illness, suffering, economic struggle and death to people across all racial, ethnic and socioeconomic groups. COVID-19 shined an even brighter light on the health inequities experienced by low-income communities and communities of color. Notably, communities of color were disproportionately affected by the disease, its many difficult side effects, and higher death rates. COVID-19 continues to be a priority and as a health care system, we are proactively working with public health professionals and clinical experts to educate and improve health outcomes in our communities.

COVID-19 Death Rate
Confirmed deaths in Wisconsin from the SARS-CoV-2 virus that causes COVID-19 is 251.3 deaths per 100,000 residents. The Ozaukee County rate is lower at 213.1 deaths per 100,000 residents. These only include cases where the underlying or contributing cause of death was the virus, meaning that the patient had to have a confirmed test result for the virus. The true number of deaths from the virus is higher by an unknown amount. These case counts are extremely biased by where testing and resources are available. Some patients expire at home and are never tested for SARS-CoV-2 (Metopio, Various state health departments, 2020-2021).

Other Chronic Diseases or Conditions

Emergency Department Rate due to Dental Problems
The ED rate due to dental problems in Ozaukee County is 174.4 per 100,000 residents, which is lower than the Wisconsin rate of 485.5 per 100,000 residents (Metopio, Wisconsin Health Association Information Center (WHAIC), 2018-2022).

Falls and Unintentional Injuries
The ED rate due to unintentional falls in Ozaukee County is 2,449.4 per 100,000 residents, which is lower than the Wisconsin average of 2,707.1 per 100,000 residents. However, the rate among Seniors (65 and older) is 6,962.7 per 100,000 residents, which is higher than the Wisconsin average among Seniors of 6,053.4 per 100,000 residents (Metopio, Wisconsin Health Association Information Center (WHAIC), 2018-2022).

5. Maternal, Child and Reproductive Health

Birth Outcomes

Pre-Term Births (Less than 37 Weeks Gestation)
In Ozaukee County, 7.7 percent of live births are considered pre-term births (less than 37 weeks gestation). This is lower than the Wisconsin rate of 10.8 percent of live births (Metopio, National Vital Statistics System-Natality, 2017-2021).

Births with Very Low Birth Weight
In Ozaukee County, 1.0 percent of live births are with a birth weight of less than 1,500 grams (3 pounds, 4 ounces). This is similar to the Wisconsin rate of 1.2 percent of live births (Metopio, National Vital Statistics System-Natality, 2017-2021).

Infant Mortality
The infant mortality rate for Ozaukee County is 4.3 deaths per 1,000 live births, which is lower than the Wisconsin average of 6.0 deaths per 1,000 live births (Metopio, National Vital Statistics System-Natality, 2016-2020).

Sexually Transmitted Infections

Sexually transmitted infection (STI) rate includes chlamydia, gonorrhea, syphilis, and HIV/AIDS with more than half of these cases being chlamydia. In Ozaukee County, the STI rate is 205.5 cases per 100,000 residents, which is lower than the Wisconsin rate of 804.9 cases per 100,000 residents (Metopio, National Center for HIV/AIDS, Viral Hepatitis, STD, and TB Prevention, 2021).

Chlamydia
Chlamydia is a common sexually transmitted disease, especially among young women ages 15-24 years. In Ozaukee County, the prevalence of chlamydia is 140.5 cases per 100,000 residents, which is lower than the Wisconsin rate of 472.3 cases per 100,000 residents (Metopio, National Center for HIV/AIDS, Viral Hepatitis, STD, and TB Prevention, 2021).

Gonorrhea
Gonorrhea is a sexually transmitted infection that is especially common among teenagers and young adults. In Ozaukee County, the gonorrhea prevalence rate is 24.9 cases per 100,000 residents, which is lower than the Wisconsin rate of 177.3 cases per 100,000 residents (Metopio, National Center for HIV/AIDS, Viral Hepatitis, STD, and TB Prevention, 2021).

Syphilis
Syphilis is a sexually transmitted infections that progresses through a series of clinical stages and can cause long-term complications if not treated correctly. In Ozaukee County, the syphilis prevalence is 2.2 cases per 100,000 residents, which is lower than the Wisconsin rate of 18.7 cases per 100,000 residents (Metopio, National Center for HIV/AIDS, Viral Hepatitis, STD, and TB Prevention, 2021).

Key findings: Maternal, Child and Reproductive Health

- The Ozaukee County infant mortality rate is lower than the Wisconsin average
- The Ozaukee County sexually transmitted infection rates are lower than the Wisconsin average

6. Environment

Why is this important?
Many people face challenges and dangers they can't control – like unsafe neighborhoods, discrimination, or trouble affording the things they need. This can have a negative impact on health and safety throughout life. This is commonly referred to as the Social Drivers of Health (SDOH) which are the conditions in the environments where people are born, live, learn, work, play, worship and age that affect a wide range of health, functioning and quality of life outcomes and risks. Social drivers of health (SDOH) have a major impact on people's health and well-being. Examples of SDOH include:

• Safe housing, transportation, and neighborhoods
• Racism, discrimination, and violence
• Education, job opportunities, and income
• Access to nutritious foods and physical activity opportunities
• Polluted air and water
• Language and literacy skills.

SDOH also contribute to health disparities and inequities. For example, people who don't have access to grocery stores with healthy foods are less likely to have good nutrition. Reduced consumption of healthy foods can raise their risk of health conditions like heart disease, diabetes, and obesity — and even lowers life expectancy relative to people who do have access to healthy foods. Just promoting healthy choices won't eliminate these and other health disparities. Instead, public health organizations and their partners in sectors like education, transportation, and housing need to take action to improve the conditions in people's environments (Healthy People 2030, Healthy People 2030 | health.gov).

Key findings: Environment

- The percentage of owner-occupied housing in Ozaukee County is higher than the state average
- The violent crime rate in Ozaukee County is significantly lower than the Wisconsin average

Housing

Owner Occupied Housing Units
In Ozaukee County, 78.4 percent of housing units were owner occupied, higher than Wisconsin at 67.4 percent. In the county, the lowest rate of ownership is among the Non-Hispanic Black population at 25.8 percent (Metopio, American Community Survey, 2017-2021).

Severely Rent-Burdened
A total of 18.6 percent of households in Ozaukee County are spending more than 50 percent of their income on rent and are considered to be severely rent-burdened. This is lower than Wisconsin at 19.2 percent and lower than the U.S. at 22.9 percent (Metopio, American Community Survey, 2017-2021).

Transportation

Households Without a Vehicle
A total of 3.9 percent of Ozaukee County households had no vehicle available, which is lower than Wisconsin at 6.3 percent and the U.S. at 8.4 percent (Metopio, American Community Survey, 2017-2021).

Food security and access to healthy foods

Food Insecurity Rate
Food insecurity is the household-level economic and social condition of limited or uncertain access to adequate food, as represented in USDA food-security reports. A total of 4.4 percent of Ozaukee County residents experienced food insecurity at some point, which is lower than Wisconsin at 7.2 percent. Additionally, the highest rates in the county are among the Non-Hispanic Black population at 14.0 percent (Metopio, Feeding America, Map the Meal Gap, 2021).

Living in Food Deserts
A food desert is defined as being low-income and further than one mile from a supermarket in urban areas or 20 miles in a rural area. In Ozaukee County, 5.4 percent of residents are living in food deserts. This is higher than Wisconsin at 4.3 percent and lower than the U.S. at 10.2 percent (Metopio, USDA, 2019).

Social Environment and Community Safety

Violent Crime Rate
Crimes related to violence (yearly rate) includes homicide, criminal sexual assault, robbery, aggravated assault, and aggravated battery. The rate for violent crime in Ozaukee County is 34.4 crimes per 100,000 residents, which is lower than Wisconsin rate of 305.4 crimes per 100,000 residents (Metopio, FBI Crime Data Explorer, 2017-2021).

Motor Vehicle Traffic Mortality
The death rate due to motor vehicle traffic in Ozaukee County is 6.3 deaths per 100,000 residents, which is lower than the Wisconsin rate 10.0 deaths per 100,000 residents and the U.S. rate at 11.5 deaths per 100,000 residents. Additionally, the rates are higher among males (9.9 death per 100,000 residents) (Metopio, National Vital Statistics System-Mortality, 2016-2020).

IV. Prioritization of Health-Related Issues

A. Priority Setting Process

The top six health issues identified in the Aurora Medical Center – Grafton County Community Health Needs Assessment were:

- Mental Health, Mental Conditions, Suicide
- Alcohol and Substance Use
- Safe and Affordable Housing
- Accessible and Affordable Health Care
- Economic Stability and Employment
- Nutrition, Physical Activity and Obesity

The top health issues identified were presented to the Aurora Medical Center - Grafton Steering Council, and members were asked to rank the issues based on the following criteria:

- Size/Seriousness of the problem
- Effectiveness of available interventions
- Available resources to address the health issue
- Health care system adequately situated to address the health issue
- Meets a defined community need as identified through data
- Potential for issue to impact other health and social issues
- Ability to effectively address or impact health issue through collaboration

Using these criteria, Aurora Medical Center - Grafton has prioritized the significant health needs to address in the 2024-2026 implementation strategy:

- Access to Innovative Care and Services
- Behavioral Health: Mental Health and Substance Use
- Social Drivers of Health

B. Health Needs Selected

Access to Innovative Care and Services
Data indicates that access to health care access and health care utilization is a top concern in Ozaukee County. Additionally, the percentage of Ozaukee County residents who see a primary care provider when sick has been decreasing over time.

Behavioral Health: Mental Health and Substance Use
Mental health and substance use continues to be a top concern in Ozaukee County. Rates of substance use, hospitalization, and mortality continue to increase over time, and stakeholders have indicated a need for more funding, access and education to reduce stigma in Ozaukee County.

Social Drivers of Health
The socioeconomic and environmental conditions where people live, work, learn, play and pray have a direct impact on a wide range of health and quality of life outcomes. Social Drivers of Health also contribute to health disparities and inequities.

C. Health Need Not Selected

Physical Activity and Obesity
Physical activity and obesity were not because one of the aims of prioritizing social drivers of health is to address the health risk factors and behaviors that put people at greater risk for conditions including obesity such as food security.

V. Approval of Community Health Needs Assessment

This Community Health Needs Assessment (CHNA) Report was adopted by the Aurora Health Care Community Board of the Advocate Health Board of Directors on December 14th, 2023.

VI. Vehicle for Community Feedback

Community Feedback

Aurora Health Care welcomes all feedback regarding the 2023 Community Health Needs Assessment. Any member of the community wishing to comment on this report, can click on the link below to complete a CHNA feedback form, or go to aurora.org/commbenefits and select "Contact Us." Questions will be addressed and will also be considered during the next CHNA cycle.

VIII. Appendices

Appendix 1: Community Health Phone Survey Summary

Ozaukee County Community Health Survey Summary

This research provides valuable behavioral data, lifestyle habits, and the prevalence of risk factors and disease conditions of county residents. This summary was prepared by JKV Research for Ascension Wisconsin, Aurora Health Care, Froedtert & the Medical College of Wisconsin and the Washington Ozaukee County Public Health Department.

*Heavy drinking is defined as 61 or more drinks for males and 31 or more drinks for females in the past month.

**Binge drinking is defined as "4 or more drinks on an occasion" for females and "5 or more drinks on an occasion" for males.

***Since 2019, the question was asked for children 5 to 17 years old. In prior years, the question was asked for children 8 to 17 years old.

General Health
In 2022, 47% of respondents reported their health as excellent or very good; 15% reported fair or poor. Respondents who were male, 65 and older, with a high school education or less, in the bottom 60 percent household income bracket or smokers were more likely to report fair or poor health. *From 2011 to 2022, there was no statistical change in the overall percent of respondents who reported their health as fair or poor, as well as from 2019 to 2022.*

Health Care Coverage
In 2022, 1% of respondents reported they were not currently covered by health care insurance. Five percent of respondents reported someone in their household was not covered at least part of the time in the past year; respondents in the middle 20 percent household income bracket or without children in the household were more likely to report this. *From 2011 to 2022, the overall percent statistically decreased for respondents 18 and older who reported no current personal health care coverage, as well as from 2019 to 2022. From 2011 to 2022, the overall percent statistically decreased for respondents 18 to 64 years old who reported no current personal health care coverage while from 2019 to 2022, there was no statistical change. From 2011 to 2022, the overall percent statistically decreased for respondents who reported someone in the household was not covered at least part of the time in the past year while from 2019 to 2022, there was no statistical change.*

In 2022, 3% of respondents reported that someone in their household had not taken their prescribed medication due to prescription costs in the past year. Four percent of respondents reported in the past year someone in their household did not receive the medical care needed; respondents in the bottom 60 percent household income bracket were more likely to report this. Fourteen percent of respondents reported in the past year someone in the household did not receive the dental care needed; respondents in the middle 20 percent household income bracket or with children in the household were more likely to report this. Six percent of respondents reported in the past year they did not receive the mental health care services they needed or considered seeking; respondents 18 to 34 years old were more likely to report this. Less than one percent of respondents reported in the past year they did not receive the alcohol/substance abuse treatment they needed or considered seeking. *From 2011 to 2022, the overall percent statistically decreased for respondents who reported someone in their household had not taken their prescribed medication due to prescription costs in the past year, as well as from 2019 to 2022. From 2011 to 2022, the overall percent statistically decreased for respondents who reported unmet medical care for a household member in the past year, as well as from 2019 to 2022. From 2011 to 2022, the overall percent statistically remained the same for respondents who reported unmet dental care for a household member in the past year, as well as from 2019 to 2022. From 2011 to 2022, the overall percent statistically increased for respondents who reported unmet mental health care services in the past year while from 2019 to 2022, there was no statistical change. Please note: since 2019, unmet medical and dental care need was asked of the household. In prior years, it was asked of the respondent only. In 2019, unmet mental health care services was asked of the household. In all other study years, it was asked of the respondent only.*

Economic Hardships
In 2022, less than one percent of respondents reported their household went hungry because they didn't have enough food in the past year. Five percent of respondents disagreed or strongly disagreed "During the past month, my household has been able to meet its needs with the money and resources we have." Respondents with children in the household were more likely to disagree their household was able to meet its needs with the money and resources they have. Two percent of respondents reported they had an issue with their current housing situation. *From 2016 to 2022, there was a statistical decrease in the overall percent of respondents who reported their household went hungry because they didn't have enough food in the past year, as well as from 2019 to 2022.*

Health Information
In 2022, 71% of respondents reported they trust a doctor or other health professional the most for health information while 10% reported they were/family member was in the health care field and their source. Eight percent reported family/friends while 6% reported the Internet. Respondents 55 and older or with a high school education or less were more likely to report doctor or other health professional. Respondents who were female, 35 to 44 years old or in the top 40 percent household income bracket were more likely to report themselves or a family member in the health care field and their most trusted source for health information. Respondents who were male, 18 to 34 years old, with some post high school education or in the bottom 40 percent household income bracket were more likely to report family/ friends. Respondents 18 to 34 years old or 45 to 54 years old were more likely to report the Internet. *From 2011 to 2022, there was a statistical increase in the overall percent of respondents who reported they trust their doctor or other health professional the most as their source of health information, as well as from 2019 to 2022. From 2011 to 2022, there was a statistical increase in the overall percent of respondents who reported they were/family member was in the health care field or family/friends as their source of health information while from 2019 to 2022, there was no statistical change. From 2011 to 2022, there was a statistical*

decrease in the overall percent of respondents who reported they trust the Internet the most as their source of health information, as well as from 2019 to 2022.

Health Services

In 2022, 90% of respondents reported they have a primary care physician they regularly see for check-ups and when they are sick; respondents who were female, 45 to 54 years old, 65 and older or married were more likely to report a primary care physician. Sixty-nine percent of respondents reported their primary place for health services when they are sick was from a doctor's or nurse practitioner's office while 13% reported an urgent care center. Seven percent reported a Quickcare clinic/Fastcare clinic. Respondents who were 65 and older or married were more likely to report a doctor's or nurse practitioner's office as their primary health care when they are sick. Respondents 35 to 54 years old were more likely to report an urgent care center as their primary health care. Respondents 18 to 44 years old were more likely to report a Quickcare clinic/Fastcare clinic as their primary health care. *From 2016 to 2022, there was no statistical change in the overall percent of respondents who reported they have a primary care physician, as well as from 2019 to 2022. From 2011 to 2022, there was a statistical decrease in the overall percent of respondents who reported their primary place for health services when they are sick was a doctor's/nurse practitioner's office while from 2019 to 2022, there was no statistical change. From 2011 to 2022, there was a statistical increase in the overall percent of respondents who reported their primary place for health services when they are sick was an urgent care center while from 2019 to 2022, there was no statistical change. From 2016 to 2022, there was a statistical increase in the overall percent of respondents who reported their primary place for health services when they are sick was a Quickcare clinic/Fastcare clinic, as well as from 2019 to 2022.*

Top Health Conditions or Behaviors Family Faces

In 2022, respondents were asked to list the top two health conditions or behaviors that they and their family face at this time. The most often cited were chronic diseases (39%) or mental health, mental conditions and suicide (14%). Respondents without children in the household were more likely to report chronic diseases as a top health condition or behavior. Respondents in the middle 20 percent household income bracket or with children in the household were more likely to report mental health, mental conditions and suicide. Six percent of respondents reported chronic pain, bad back, knee replacement and arthritis. Five percent of respondents reported unintentional injury, including falls and motor vehicle accidents. Five percent of respondents reported nutrition, physical activity and obesity as a top health condition or behavior. Four percent of respondents reported communicable diseases or COVID-19; respondents with children in the household were more likely to report this.

Health Conditions

In 2022, out of six health conditions listed, the most often mentioned in the past three years was high blood pressure (30%), high blood cholesterol (23%) or a mental health condition (21%). Respondents who were male or 65 and older were more likely to report high blood pressure. Respondents who were 65 and older, in the bottom 40 percent household income bracket or overweight were more likely to report high blood cholesterol. Respondents who were female, 18 to 44 years old or with some post high school education were more likely to report a mental health condition. Eleven percent reported they were treated for, or told they had heart disease/condition in the past three years. Respondents 65 and older or in the bottom 60 percent household income bracket were more likely to report heart disease/condition. Seven percent of respondents reported diabetes; respondents 65 and older or in the bottom 60 percent household income bracket were more likely to report this. Eight percent reported current asthma; female respondents were more likely to report this. Of respondents who reported these health conditions, at least 85% reported they were regularly seeing a doctor, nurse or other health care provider for their high blood pressure, high blood cholesterol, heart disease/condition, mental health condition or diabetes while 66% reported current asthma. *From 2011 to 2022, there was no statistical change in the overall percent of respondents who reported high blood pressure, high blood cholesterol, diabetes or current asthma, as well as from 2019 to 2022. From 2011 to 2022, there was a statistical increase in the overall percent of respondents who reported a mental health condition while from 2019 to 2022, there was no statistical change. From 2011 to 2022, there was a statistical increase in the overall percent of respondents who reported heart disease/condition, as well as from 2019 to 2022.*

Body Weight

In 2022, 67% of respondents were classified as at least overweight while 30% were obese. Respondents 55 to 64 years old were more likely to be at least overweight. Married respondents were more likely to be obese. *From 2011 to 2022, there was a statistical increase in the overall percent of respondents who were at least overweight or obese while from 2019 to 2022, there was no statistical change.*

Tobacco Product Use

In 2022, 6% of respondents were current tobacco cigarette smokers; respondents in the bottom 40 percent household income bracket were more likely to be a smoker. Four percent of respondents used electronic vapor products in the past month; respondents 18 to 34 years old, with a high school education or less or in the middle 20 percent household income bracket were more likely to report this. Five percent of respondents used cigars, cigarillos or little cigars in the past month while 3% of respondents used smokeless tobacco. Respondents who were male or 18 to 34 years old were more likely to report they used cigars/cigarillos/little cigars. *From 2011 to 2022, there was a statistical decrease in the overall percent of respondents who were current tobacco cigarette smokers, as well as from 2019 to 2022. From 2014 to 2022, there was a statistical decrease in the overall percent of respondents who reported electronic vapor product use in the past month while from 2019 to 2022, there was no statistical change. From 2014 to 2022, there was no statistical change in the overall percent of respondents who used cigars/cigarillos/little cigars in the past month, as well as from 2019 to 2022. From 2014 to 2022, there was no statistical change in the overall percent of respondents who used smokeless tobacco in the past month while from 2019 to 2022, there was a statistical decrease.*

In 2022, 88% of respondents reported smoking is not allowed anywhere inside the home. Respondents who were in the top 60 percent household income bracket, married or with children in the household were more likely to report smoking is not allowed anywhere inside the home. *From 2011 to 2022, there was a statistical increase in the overall percent of respondents who reported smoking is not allowed anywhere inside the home while from 2019 to 2022, there was no statistical change.*

Delta-8 Use

In 2022, 6% of respondents used Delta-8, also known as marijuana-lite, diet weed or dabs, in the past month. Respondents who were 18 to 34 years old, in the middle 20 percent household income bracket or unmarried were more likely to report they used Delta-8 in the past month.

Alcohol Use

In 2022, 74% of respondents had an alcoholic drink in the past month. Eleven percent of respondents were heavy drinkers in the past month (females 31+ drinks per month and males 61+ drinks) while 24% of respondents were binge drinkers (females 4+ drinks in a row and males 5+ drinks). Respondents who were 55 to 64 years old were more likely to report heavy drinking. Respondents who were male or 18 to 34 years old were more likely to have binged in the past month. *From 2011 to 2022, there was no statistical change in the overall percent of respondents who reported binge drinking in the past month while from 2019 to 2022, there was a statistical decrease.*

Mental Health Status

In 2022, 2% of respondents reported they always or nearly always felt sad, blue or depressed in the past month. Three percent of respondents felt so overwhelmed they considered suicide in the past year. Four percent of respondents reported they seldom or never find meaning and purpose in daily life; respondents in the middle 20 percent household income bracket were more likely to report this. *From 2011 to 2022, there was no statistical change in the overall percent of respondents who reported they always or nearly always felt sad, blue or depressed in the past month while from 2019 to 2022, there was a statistical decrease. From 2011 to 2022, there was no statistical change in the overall percent of respondents who reported they considered suicide in the past year or they seldom/never find meaning and purpose in daily life, as well as from 2019 to 2022.*

Children in Household

In 2022, the respondent was asked if they make health care decisions for children living in the household. If yes, they were asked a series of questions about the health and behavior of a randomly selected child. Ninety-three percent of respondents reported they have one or more persons they think of as the child's personal health care provider, with 98% reporting the child visited their personal health care provider for preventive care during the past year. Two percent of respondents reported in the past year the child did not receive the dental care needed. Twelve percent of respondents reported the child had a diagnosed mental health condition. Four percent of respondents reported the child was overweight or obese. Less than one percent of respondents reported the child currently had asthma. Zero percent of respondents reported the child had diabetes. Zero percent of respondents reported the 5 to 17 year old child was seldom/never safe in their community. Six percent of respondents reported the 5 to 17 year old child always or nearly always felt unhappy, sad or depressed in the past six months. Fourteen percent reported the 5 to 17 year old child experienced some form of bullying in the past year; 14% reported verbal bullying, 4% reported cyber bullying and 0% reported physical bullying. *From 2011 to 2022, there was no statistical change in the overall percent of respondents who reported the child had a personal health care provider, as well as from 2019 to 2022. From 2011 to 2022, there was a statistical increase in the overall percent of respondents who reported the child visited their personal health care provider in the past year for preventive care, as well as from 2019 to*

2022. From 2011 to 2022, there was no statistical change in the overall percent of respondents who reported in the past year the child had an unmet dental care need, as well as from 2019 to 2022. From 2011 to 2022, there was no statistical change in the overall percent of respondents who reported the child currently had asthma, while from 2019 to 2022, there was a statistical decrease. From 2011 to 2022, there was no statistical change in the overall percent of respondents who reported the 5 to 17 year old child was seldom/never safe in their community, as well as from 2019 to 2022. From 2011 to 2022, there was a statistical increase in the overall percent of respondents who reported the 5 to 17 year old child always or nearly always felt unhappy/sad/depressed in the past six months while from 2019 to 2022, there was no statistical change. From 2011 to 2022, there was no statistical change in the overall percent of respondents who reported in the past year the 5 to 17 year old child was bullied overall or verbally bullied while from 2019 to 2022, there was a statistical decrease. From 2011 to 2022, there was no statistical change in the overall percent of respondents who reported in the past year the 5 to 17 year old child was cyber bullied or physically bullied, as well as from 2019 to 2022.

Top County Social or Economic Issues

In 2022, respondents were asked to list the top two social or economic issues in the county. The most often cited were racism/discrimination (13%), food insecurity (13%), economic stability/employment (12%) or accessible/affordable health care (12%). Respondents 35 to 44 years old or in the top 40 percent household income bracket were more likely to report racism and discrimination as a top social or economic issue. Respondents who were female or 45 to 54 years old were more likely to report food insecurity. Respondents who were female, 35 to 44 years old, with a college education or married respondents were more likely to report accessible and affordable health care as a top issue. Nine percent of respondents reported social connectedness and belonging; respondents 18 to 34 years old or with some post high school education were more likely to report this. Nine percent of respondents reported education access and quality as a top issue. Eight percent of respondents reported community violence and crime; respondents who were in the middle 20 percent household income bracket or married were more likely to report this. Seven percent of respondents reported accessible and affordable transportation as a top issue; married respondents were more likely to report this. Seven percent of respondents reported safe and affordable housing. Six percent of respondents reported politics/government as a top issue; respondents who were male or 55 to 64 years old were more likely to report this. Five percent of respondents reported inflation as a top social or economic issue.

Top County Health Conditions or Behaviors

In 2022, respondents were asked to list the top two health or behavioral issues in the county that must be addressed in order to improve the health of county residents. The most often cited were mental health, mental conditions and suicide (33%) or nutrition, physical activity and obesity (26%). Respondents who were female, 35 to 44 years old, in the top 40 percent household income bracket or married were more likely to report mental health, mental conditions and suicide as a top health or behavioral issue. Respondents 45 to 54 years old, with a college education or in the top 40 percent household income bracket were more likely to report nutrition, physical activity and obesity. Twenty-three percent of respondents reported alcohol abuse and drug/substance use. Eight percent of respondents reported communicable diseases or COVID-19 as a top issue; female respondents were more likely to report this. Eight percent of respondents reported access to affordable health care as a top issue. Seven percent of respondents reported chronic diseases; respondents 35 to 44 years old were more likely to report this. Four percent of respondents reported tobacco and vaping products.

Appendix 2: Community Health Online Survey Frequencies

2022 Ozaukee County
Online Community Health Survey
Frequencies Report

Methodology
To supplement the Community Health Survey phone survey, an online survey was created by partners: Ascension Wisconsin, Aurora Health Care, Froedtert & the Medical College of Wisconsin and the Washington Ozaukee Public Health Department.

An English and Spanish version were entered in to Survey Monkey with links and QR codes for easy access. Partners marketed the survey throughout the counties. A total of 113 online surveys were completed between July 20 and November 20, 2022. Post-stratification was conducted at the age-group level by sex of the 2019 characteristics of the American Community Survey. The margin of error is ±9 percent. The margin of error for smaller subgroups will be larger than ±9 percent, since fewer respondents are in that category.

The survey was conducted by JKV Research, LLC. For technical information about survey methodology, contact Janet Kempf Vande Hey, M.S. at (920) 439-1399 or janet.vandehey@jkvresearch.com. For further information about the survey, contact the Washington Ozaukee Public Health Division at (262) 335-4462.

1. Do you live in Washington or Ozaukee County?

Yes-Washington County	0%
Yes-Ozaukee County	100
No	0

2. Do you work in Washington or Ozaukee County?

Yes	68%
No	32

3. Below are some statements about health care services and providers (doctors, nurse practitioners, physician assistants or primary care clinics) in Washington/Ozaukee County. Select an option for your response in each row below. [Respondents who selected "not applicable" were excluded.]

		Yes	No	Not Sure
a.	I have a health care provider where I regularly go for check-ups and when I am sick	94%	6%	0%
b.	I can get an appointment for my health needs quickly	81	13	6
c.	I can easily get to my health care provider or clinic	94	4	2
d.	I am heard, seen and listened to when receiving health care	94	2	4
e.	I am treated differently because of my race or ethnicity when receiving health care	4	88	9
f.	I am treated differently because of my gender when receiving health care	3	86	11
g.	I am treated differently because of my sexual orientation when receiving health care	0	92	8
h.	My family/support people are seen and listened to when I receive health care	90	4	6
i.	I am seen and listened to when my child/children are receiving health care	96	4	0

4. In the past year, did you seek community resource support from an organization in Washington or Ozaukee County? Examples include food pantries, support groups, energy assistance, pregnancy resources or housing assistance.

Yes ..... 3% → CONTINUE WITH Q5
No ..... 96 → GO TO Q8
Not sure ..... <1 → GO TO Q8

5. What resource(s) did you seek? (open-ended) [10 Respondents: Multiple Responses Accepted]

Food Assistance/Pantry/Salvation Army/St. Vincent DePaul ..... 4 respondents
Health Care/Badger Care/Medicaid/Pink Heals/The Crossing/Planned Parenthood ..... 2 respondents
Mental Health or AODA Services ..... 2 respondents
Energy/Heat/Utility Assistance ..... 1 respondent
Aging and Disability Resource Center ..... 1 respondent
Human Services/WIC ..... 1 respondent
Transportation ..... 1 respondent
Other ..... 2 respondents

6. How supported did you feel by [Resource] offered to you? Would you say… [10 Respondents Listing 15 Resources]

Not at all supported ..... 4 respondents
Slightly supported ..... 1 respondent
Somewhat supported ..... 3 respondents
Very supported ..... 4 respondents
Extremely supported ..... 3 respondents
Not sure ..... 0 respondents

7. What is the reason or reasons you answered the way you did? [6 Respondents Listing 7 Resources]

Stigma related to needing help/disapproval	3 respondents
Lack of knowledge of where to go	3 respondents
Finances	1 respondent
Poor quality of care	0 respondents
Inconvenient hours	0 respondents
Other, please specify	7 respondents

- Asked with the person I had on the line "is she a drinker?" And we're judgmental and not helpful.
- My age was 64, too young for ride assistance. Ozaukee taxi was scheduling 9 days out, at the time.
- Not enough staff. Not able to send a counselor to house. Ended up going to Rodgers.
- Was referred out of county.
- Could not schedule with psychiatrist or with psychologist/counselor at all and were told will be on a call back list for up to 6 months wait time.
- No medical shelter in Ozaukee County (somewhere patients can go that need medical care but are homeless) closest is Salvation Army in Milwaukee which has medical beds and do not need to leave shelter and be on the street for hours during the day.
- High sodium and poor nutrition for options.

8. During the past year has anyone made you afraid for your personal safety?

Yes	6%	→CONTINUE WITH Q9
No	92	→GO TO Q10
Not sure	1	→GO TO Q10

Yes 21%
No 78
Not sure 1

13. Have you ever been treated for sexually transmitted infections, including HIV, the virus that causes AIDS?

Yes 4%
No 96
Not sure ..... <1

14. What are the **two** largest social or economic issues in our community that must be addressed in order to improve the quality of life of county residents? (Check up to two responses.)

Accessible and affordable health care (medical, dental, mental health)	29%
Affordable and accessible childcare	24
Safe and affordable housing	22
Economic stability and employment	16
Community violence and crime	14
Racism and discrimination	14
Accessible and affordable transportation	10
Environmental health (clean air, safe water, etc)	9
Education access and quality	7
Social connectedness and belonging	7
Family support	6
Food insecurity	5
Access to social services	3
Quality of health care	3
Not sure	9
Do not want to answer	2
Other, please specify	4

- Affordable local indoor walking area.
- Affordable senior care facility.
- Better business environment.
- Extreme conservatism in Washington County is out of control which leads to adult bullying and intimidation. Adults need to grow up.
- Help for drug addicts.
- Illegal drug use.
- In-patient mental health care.
- Local jobs that pay comfortable and livable wages.
- Lower our fuel prices so they are in line with surrounding counties, not 30-40 cents more expensive. It drives Washington County residents crazy. Also, preserve our local small Ag and keep investing in road improvements and maintenance.
- Need for greater trust in health care providers vs. conservative political idealism.
- Nursing facilities for seniors and access to reproductive care including abortions.
- They need to stop the boosters of a new technology, experimental, untested so-called vaccination for a virus that has mutated to a mild version of its original self.
- Transportation to Rehabs for elderly - too far for a lot of people to drive.
- Washington County is so incredibly political. The deep conservative values are so strong and wrong. The county is NOT open and welcome to come together for the best interest of everyone. It is their way or you are wrong. There is too much hate in this county and adults need to start acting like adults. Our elected officials need to start embracing all residents, not just those with the same beliefs as them. I was happy living here until the last 2-3 years. Long time resident too.
- Women's Healthcare.

15. What are the **two** largest health conditions or behaviors that must be addressed in order to improve the health of county residents? (Check up to two responses.)

Mental health, mental conditions and suicide	62%
Alcohol and substance use	54
Nutrition, physical activity and obesity	29
Tobacco and vaping products	9
Chronic diseases	9
Communicable diseases or Covid-19	5
Maternal, infant, and child health	5
Reproductive and sexual health	4
Intimate partner and domestic violence	3
Unintentional injury, including falls and motor vehicle accidents	2
Oral health	0
Not sure	8

Other, please specify	<1

- Affordable eldercare.
- Respect of individual body autonomy.
- They must stop pushing the new technology, experimental, untested so-called vaccination for a virus that has mutated to a mild version of its original self. And discontinue the ineffective masks.

Finally, a few questions about you to make sure we have a good representation of the people in Washington County/Ozaukee County.

16. In what zip code do you live? Please enter your five-digit zip code.

53095	14%
